

I must again register protest over the "go ahead" to start pilot BPL Programs in several regions of Washington State and the Nation in general. Based on all technical data from testing in the United States and in Foreign Countries who have already quashed their "programs", it is simply technically foolhardy to implement this system.

It is highly doubtful that revenues from "Broadband Services" will support this technology, resulting in the overall increase of energy bills to support the BPL systems.
